

BIG SCIENCE AND BIG BUSINESS

This year will see the 21st edition of the Precision Fair. On 16 and 17 November 2022, the fair will be held in the Brabanthallen in Den Bosch (NL) – for the second time at this location, following the successful premiere last year. Over 300 exhibitors have already confirmed their participation and the fair will be packed with a Big Science programme, plenty of other lectures, young talent pitches, award ceremonies and a meet & match event.

From micrometers to nanometers and even picometers, the demand for ever more accurate and smaller measurement, production and construction has been increasing unabated for years. Products and technologies are also becoming more complex and smarter. Precision technology has therefore rapidly developed into the stable basis for many devices and components around us. It is not without reason that precision technology is one of the foundations of the Dutch knowledge and innovation economy. As an exponent of this industry, the Precision Fair is the meeting place for the entire precision technology value chain: from mechatronic engineering & systems, metrology, vacuum & clean, microprocessing & -motion to production for high precision.

The Precision Fair's collaboration with Big Science projects, but also with large international OEMs, has resulted in a large number of assignments for the business community and continues to do so. The limit of precision technology has not yet been reached. Meeting, collaborating and sharing knowledge are indispensable to keep up with the rapid technological developments.

At the Precision Fair, visitors can meet the top specialists from companies, training institutes, government agencies, technical universities and incubator programmes in the field of precision technology. These specialists can be found on the exhibition floor, they will share the latest developments in the lecture programme and you will participate in the Meet & Match. Special attention will be paid to young talent, with students (teams) and start-ups presenting their innovative projects in the Young Talent Program in short pitches and poster presentations.

Partially overlapping with the Precision Fair, the European Society for Precision Engineering and Nanotechnology (euspen) will organise its second international Special Interest Group on Precision Motion Systems & Control congress on Tuesday 15 and Wednesday 16 November.

Impression of the Precision Fair 2021, which was the first edition in the Brabanthallen in Den Bosch.

The euspen congress is for members only, and on Wednesday afternoon the international delegates will visit the exhibition floor and a number of presentations will be given in the public lecture programme.

To top matters off, both fair days will be concluded with an award ceremony, hosted by DSPE, for the Ir. A. Davidson Award on Wednesday and the Wim van der Hoek Award for the best graduation work in mechanical engineering on Thursday (see also page 56), which means that the final spotlight of the Precision Fair will be on young talent.
